Summary

Final-year B.Tech AI and ML student who builds full-stack MERN applications with real-time data, payments, and LLM integration. Shipped 3 full-stack projects and a real-time fleet dashboard during a remote web development internship.

Experience

Web Development Intern (Associate L1) Aug 2026 – Oct 2026
Infotact Solutions *Remote*

- Engineered FleetDash, a real-time fleet telemetry dashboard, using React, Node.js, and Socket.IO to stream live vehicle location, speed, and fuel data to the browser.
- Separated telemetry ingestion and alert delivery into 2 independent pipelines with Redis Pub/Sub, so data spikes do not delay notifications.
- Offloaded CPU-intensive telemetry processing to Node.js worker threads, keeping the event loop free for live socket traffic.
- Modeled high-frequency readings in MongoDB with the Bucket Pattern, grouping data into 1-hour documents for faster historical retrieval.
- Implemented geofence entry and exit alerts with Turf.js and rendered moving vehicles on Canvas with requestAnimationFrame.
- Presented progress in weekly code reviews and sprint meetings, and documented REST APIs and system architecture for the team.

Projects

LPGenius: LPG Agency Management Platform | *React, Node.js, Express, MongoDB, Zod, Jest* | GitHub

- Architected a full-stack platform with 8 Mongoose models and 17 REST endpoints covering OTP login, cylinder bookings, complaints, and a dealer dashboard.
- Designed a refill prediction engine that estimates remaining gas days from cylinder mass, blending 70% order history (exponential moving average) with a 30% household baseline.
- Created a bilingual English and Hindi chatbot that classifies messages into 7 intents and flags gas-leak reports as high priority for dealers.
- Secured authentication with SHA-256 hashed OTPs, attempt limits, and Zod validation, backed by 16 Jest and Supertest integration tests.

BaZar: E-Commerce Platform | *React, Firebase, Razorpay, Tailwind CSS* | Live Demo | GitHub

- Shipped a 12-page storefront with 13 routes covering product browsing, search, cart, checkout, and order history, deployed on Vercel.
- Integrated 2 payment modes, cash on delivery and Razorpay with server-side verification, plus Google sign-in through Firebase Authentication.
- Added hands-free voice navigation with the Web Speech API, supporting 8 spoken commands such as open search, cart, and orders.

AI Virtual Assistant | *React, Node.js, Express, MongoDB, Gemini API* | Live Demo | GitHub

- Prompted the Google Gemini API to classify spoken commands into 12 intent types and return structured JSON actions such as search, YouTube playback, and weather.
- Protected user accounts with bcrypt password hashing and JWT sessions in HTTP-only cookies, and stored custom assistant avatars with Multer and Cloudinary.
- Deployed across 3 platforms: Vercel for the frontend, Render for the API, and MongoDB Atlas for data.

Education

VIT Bhopal University Bhopal, MP
B.Tech in Artificial Intelligence and Machine Learning *Sep 2023 – May 2027*

Technical Skills

Languages: JavaScript, TypeScript, Python, Java, SQL, HTML5, CSS3
Frontend: React.js, Tailwind CSS, Responsive Design, Context API
Backend: Node.js, Express.js, REST APIs, JWT Authentication, Socket.IO, Redis, Zod
Databases: MongoDB, Firebase (Auth, Firestore)
AI: Gemini API, LLM API Integration, Agentic AI, NLP
Tools: Git, GitHub, Postman, Jest, Vercel, Render, VS Code

Certifications

Oracle Certified Agentic AI Foundations Associate Sep 2026
Oracle University *Valid until Sep 2028*
Programming with JavaScript Mar 2025
Meta (Coursera)
Introduction to AI Dec 2024
IBM (Coursera)

Leadership

Core Member and PR Lead Sep 2023 – Jan 2025
The EV Club, VIT Bhopal *Bhopal, MP*

- Led public relations and outreach for club events and communications over a 16-month term.
